Orcas Island & the San Juan Islands · We come to you

AIRCRAFT
PRICE GUIDE

Our owner has hands-on flying experience, so he knows exactly how these surfaces should be handled. **Pitot tubes, static ports and sensors are masked before anything touches the aircraft, every time.**

PACKAGES

Service	Single piston	Light twin x1.5	Cabin twin x2	Turboprop x2.75
Wash 3–4 hrs · exterior, belly, windows	\$350	\$525	\$700	\$950
Wash & Wax 5–7 hrs · adds a full protection pass	\$500	\$750	\$1,000	\$1,375
Wash, Polish & Wax 8–11 hrs · oxidation removal, then protection	\$950	\$1,425	\$1,900	\$2,600
Full Ceramic Package 2–3 days · longest protection offered	\$2,000	\$3,000	\$4,000	\$5,500

WHAT EACH ONE INCLUDES

Wash. Fuselage, wings, tail and belly, exhaust streaks, and windows.

Wash & Wax. The wash, plus a dedicated pass to build protection evenly.

Wash, Polish & Wax. Adds oxidation removal and polishing. This is what brings the shine back.

Full Ceramic. Wash, clay, polish, panel prep, then a ceramic coating.

HOW IT WORKS

We come to you. Your hangar or tiedown, on Orcas or nearby.

You do not need to be there for the whole job, but be there at the start so you can point out anything you do not want touched.

Water is helpful, not required. We carry a waterless system for ramps without a hose.

SIZE CLASSES

Single piston. 172, Cherokee, Bonanza

Light twin. Baron, Seneca, Aztec

Cabin twin. Navajo, 421

Turboprop. King Air, PC-12

Anything larger. Happily quoted, just ask.

GOOD TO KNOW

Book a week ahead where you can. Weather moves things around out here.

Ceramic needs dry hangar time to cure, usually overnight at least. We will say so before we start.

Aircraft only on this sheet. We do boats and cars too, just ask.

ANNUAL CARE PLAN

Keep it on the calendar and it costs less. **One visit a year takes 10% off. Two visits a year take 15% off each visit.** Built on the Full Ceramic Package, so your aircraft stays protected without booking one-off every season.

Every aircraft is quoted individually. Prices shown are starting points for an aircraft in normal condition. Heavy oxidation or a long-neglected finish runs higher, and we will always tell you before we begin, never after.
